Summary

Final-year Computer Science (Cyber Security) undergraduate with production engineering experience at Frappe (ERP-Next), a shipped product with 6,000+ users, and hands-on projects across full-stack development, LLM/RAG systems, and security. Comfortable owning features end to end in fast, PR-driven codebases.

Education

B.M.S. College of Engineering, Bengaluru **CGPA: 8.6**
B.E., Computer Science & Engineering (IoT and Cyber Security incl. Blockchain Technology) 2023 – 2027
Cert: Supervised ML — DeepLearning.AI (2026)

Experience

Software and Product Intern **Remote**
Frappe Technologies (ERPNext) **Oct 2025 – Dec 2025**

- Shipped core editor and UI features across Frappe Drive and Frappe Writer, including customizable tables built with ProseMirror to improve editor flexibility.
- Built and refined Vue 3 + Vite + Tailwind components using frappe-ui; worked with Git submodules, CI pipelines, PR reviews, and debugging workflows in a production open-source codebase.

Sponsorship Point of Contact **Bengaluru**
UTSAV, BMSCE — one of Bengaluru's largest college festivals **Oct 2024 – Apr 2026**

- Owned brand partnerships end to end for a festival with footfall in the tens of thousands; onboarded Paytm, Realme, and Unibic through 50+ cold outreaches, and executed on-ground activations with brand teams.

Projects

Image Classification with CNNs — *Python, PyTorch, torchvision, OpenCV*

- Built an image classification pipeline on CIFAR-10 using a CNN trained from scratch and fine-tuned ResNet-18 via transfer learning; applied data augmentation and OpenCV preprocessing, and evaluated models with accuracy and confusion-matrix analysis.

RAG System for Frappe App Generation — *LangChain, Ollama (qwen3-coder), nomic-embed-text*

- Designed a fully local retrieval-augmented code-generation pipeline that grounds LLM output in retrieved Frappe framework conventions, producing framework-correct app code instead of relying on model memory.

Veri-Update — Decentralized Software Update Verification — *Solidity, Truffle, Web3, Tailwind*

- Developed a blockchain-backed system for secure software update delivery, verifying update integrity and authenticity to protect against tampered or malicious updates.

NoteGo.in — *Founder — MERN Stack*

- Built and launched a MERN-based study-materials platform adopted by 6,000+ students at BMSCE — took it from idea to campus-wide adoption.

Skills

- **Languages:** Python, C++, JavaScript, Solidity, SQL
- **Frameworks & Tools:** React.js, Node.js, MongoDB, FastAPI, PostgreSQL, PyTorch, Pandas, REST APIs, LangChain, Wireshark, Selenium, Git/GitHub, Linux/Unix Shell, Figma
- **Coursework:** Cyber Security, Cryptography, Ethical Hacking, Cloud Computing & Security, ML, DSA, OS, Networks

Achievements and Responsibilities

Security Tester — e-Governance Platform, BMSCE

- Identified a critical vulnerability exposing sensitive student data via improper authentication flows; performed manual testing and exploit analysis (input validation, access control flaws).
- Proposed and helped implement a token-based authentication system, significantly improving data security.

Google Code-in 2019–20 (Runner-Up)

- Global finalist among 15,000+ participants; completed 37+ open-source contributions to OpenMRS spanning Android development, frontend improvements, and bug fixes.
